Sufficient moisture is thus conserved for a dry year, and not too much for a wet one. There are few or no weeds, as all the seeds near the surface have germinated and been killed. For the past fourteen years the best and cleanest grain has been grown on fallow worked this way. This method is generally applicable in Eastern Assiniboia, but needs to be somewhat modified in portions of Alberta and Saskatchewan, where the conditions of moisture are usually different. The modifications needed are given by Mr. Mackay, as he gains experience from time to time in his annual report. Indian Head Experimental Station. At the experimental farm at Indian Head, the crops have been heavier this year than ever before. The highest yielding wheat in the experimental plots there this season was the...
